

EDGE

EDGE TR7 PRO Steam Cleaner & Vacuum

Double Filter System

Environmentally Friendly

Multi-Powered Vacuumation

Steam cleaning possesses a number of benefits over more traditional cleaning methods. Cost, hygiene and environmental factors are amongst some of the benefits associated with steam cleaning. Using dry-steam at a temperature in excess of 120°C will completely sanitise surfaces, destroying micro-organisms such as bacteria, mites, and mildew. The Edge TR7 Pro steam & vacuum machine will do just this, with an operating temperature of 152°C which is well above the 120°C criteria, surfaces are assured to be cleaned and completely sanitised. In addition to the steam facility, the TR7 Pro has a vacuum that will immediately suck-up all residue grease, grime and bacteria. The exclusive "VAP FILTER", a pipe sprayed with 152°C of continuous steam catches even the smallest particles of pollen, mites and micro-dust, often responsible for serious respiratory ailments, and perfectly purifies the exhausted air. The TR7 Pro uses very little water and no harsh chemicals, so we can say without exception that the TR7 Pro is an extremely environmentally friendly machine.
